Tech Terms in Our Life

Pair 13

Students:

Edison Manuel Aguero Diaz – Digital Camera

Danuel Ezequiel Cuevas Tejeda – Robot Vacuum

Device: Digital Camera

What it does: Captures photos and records high-quality videos.

3 Key Components:

- Lens
- Image Sensor
- Battery

Tech Terms

Resolution:

Image detail in pixels

Aperture:

Controls light & background blur

ISO:

Light sensitivity

Real-life example: “I use my digital camera at events and for video projects.”

Device: Robot Vacuum

What it does: Automatically cleans floors and collects dust.

3 Key Components:

- Sensors
- Brush & Suction System
- Battery & Dock

Tech Terms

LiDAR / Mapping:

Creates home map

Suction Power (Pa):

Cleaning strength

HEPA Filter:

Traps tiny particles

Real-life example: “It cleans the living room while I study.”

Comparison + Opinion

Similarities:

- Both use sensors
- Both use rechargeable batteries

Differences:

- Camera captures images; vacuum cleans floors
- Camera is manual; vacuum is autonomous

Which is better for students?

Robot vacuum saves more time.

Future improvement:

- Camera: better low-light performance
- Robot vacuum: smarter obstacle detection

Thank You!
